Librarian

COURSES OF INSTRUCTION

Two parallel and equivalent courses of study are pursued in the College, each occupying four years.

1. The Classical Course, in which the Latin and Greek languages and literatures are combined with mathematical, scientific, and philosophical studies in that proportion which the experience of the best colleges has sanctioned. This course leads to the degree of Bachelor of Arts.

2. The Philosophical Course, in which German and certain scientific and English studies are substituted for the Greek. This course leads to the degree of Bachelor of Philosophy.

It is expected that those who enter this course will be fully equal in general culture to those in the Classical Course.

Students whose circumstances make a shorter course of study desirable are admitted to the privileges of the college and allowed to select such studies from the two prescribed courses as, in the judgment of the Faculty, they are prepared to pursue with profit. Such special students must show by examination or otherwise their fitness for the course proposed, and are subject to the same regulations and discipline and to the same examinations in the studies pursued, as the students in the regular courses.

TERMS OF ADMISSION

Candidates for admission to the Freshman Class are examined in the following subjects:

ENGLISH: Geography; American History; English Grammar including sentential analysis. A short essay will be required as a part of the examination; the subject for the essay in 1888 will be from Shakespeare's *Julius Cæsar*, Scott's *Ivanhoe* or Longfellow's *Evangeline*.

MATHEMATICS: Arithmetic, Algebra through Quadratic Equations, Geometry, first three books, say of Newcomb's text-book.

LATIN: Grammar, Allen and Greenough's, with special reference to inflections, syntax of nouns and indirect discourse. Composition, Allen's to Lesson XXX, or an equivalent. Authors: Cæsar, four books; Cicero, seven orations; Vergil, six books. Roman History: Creighton's Primer or Smith's *Smaller History of Rome* is recommended.

GREEK: Grammar, Goodwin's. Composition, Jones's to Lesson XX. Authors: Xenophon, three books of the *Anabasis*, and Phillpott's *Selections from the Hellenica*. Greek History: Fyffe's Primer is recommended.

Additional Mathematics, Elementary Science, or other studies usually pursued in High Schools, will be accepted as a substitute for a portion of the Greek or Latin.

Candidates for admission to the Freshman Class in the Philosophical Course may substitute the following studies for Greek:

SCIENCE: Physical Geography, Elementary Physics, Geology.

GERMAN: Whitney's Elementary Grammar; Klemm's Reader; Schiller: *Wilhelm Tell* and *Maria Stuart*, or an equivalent amount of classical German.

MARIETTA COLLEGE

Candidates for advanced standing are examined in the requirements for admission to College, and also in the studies which have been pursued by the class which they wish to enter. For the particular books in Greek, Latin, or German, studied by each class, equivalent amounts may be offered.

No one can be admitted to the Freshman Class until he has completed his fourteenth year, or to an advanced standing without a corresponding increase of age.

Testimonials of good moral character are in all cases required, and those who come from other colleges must produce certificates of dismissal in good standing.

The regular examination for admission to College is held on Tuesday before Commencement (June 26, 1888). Candidates are urged to present themselves at this examination if it is possible. A second examination is held at the opening of the Fall Term.

SCHEDULE OF STUDIES

CLASSICAL COURSE

FRESHMAN YEAR

FIRST TERM, FIFTEEN WEEKS

LATIN (4)*—Livy; Review of the Grammar; Roman History; Prose Composition. Sight Reading from Nepos.

GREEK (5)—Lysias (four orations); Formation of words; Review of Syntax; Composition and History through the year.

MATHEMATICS (4)—Newcomb's Elements of Geometry, completed.

RHETORIC (1)—Kellogg's; Written exercises and Declamations.

BIBLE (1)—Maclear's N. T. History and the Gospel of Mark, through the year.

SECOND TERM, TWELVE WEEKS

LATIN (4)—Livy; Horace: Odes (Books I and II); Nepos; Roman Antiquities; Prose Composition; Word Formation.

GREEK (4)—Herodotus: Persian Wars; Sidgwick's Greek Prose Composition; Selections from Grote.

MATHEMATICS (5)—Part II of Newcomb's Algebra. Especial attention is given to the Theory of Equations and the Theory of Probabilities.

RHETORIC (1)—Kellogg's, continued; Compositions and Declamations.

*A number in parentheses after a study denotes the number of recitations per week.

MARIETTA COLLEGE

THIRD TERM, ELEVEN WEEKS

LATIN (5)—Horace: Odes (Books III and IV), Satires and Epistles (Book I); Latin Synonyms; Roman Literature; Written Translations.

GREEK (4)—Thucydides (Book I); Composition and History.

MATHEMATICS (4)—Wentworth's Plane Trigonometry and Surveying.

RHETORIC (1)—Kellogg's, completed; Compositions and Declamations.

SOPHOMORE YEAR

FIRST TERM

GREEK (4)—Homer: Odyssey (V-XII); Mythology and Private Life of the Greeks.

MATHEMATICS (5)—Spherical Trigonometry; Wentworth's Analytic Geometry, begun.

PHYSIOLOGY (4)—Martin's "The Human Body."

ENGLISH (1)—English Literature, begun: Period of Early English.

RHETORIC—Compositions and Declamations.

BIBLE (1)—The Acts of the Apostles, through the year.

SECOND TERM

LATIN (5)—Plautus: The Captivi, Trinummus; Pliny or Juvenal; History of Roman Comedy.

GERMAN (4)—Whitney's Grammar; Grimm's Maerchen; Die Eisjungfrau (Andersen).

MATHEMATICS (4)—Wentworth's Analytic Geometry, completed.

ENGLISH (1)—English Literature: from Chaucer to Spenser.

RHETORIC—Compositions and Declamations.

THIRD TERM

GREEK (4)—Plato: Apology and Crito; or Selections from the Lyric Poets; History of Greek Literature.

SCHEDULE OF STUDIES

GERMAN (5)—Grammar; German Prose; Sight Reading.

PHYSICS (4)—Dana's Mechanics. Especial attention is given to Elementary Dynamics.

ENGLISH (1)—English Literature: Elizabethan Period.

RHETORIC—Compositions and Declamations.

JUNIOR YEAR

FIRST TERM

ENGLISH (4)—English Literature: from Milton to Wordsworth.

RHETORIC (1)—Whately's; Compositions and Orations.

BIBLE (1)—The Gospel of John, through the year.

And any two of the following studies:

LATIN (4)—Horace: Epistles (Book II) Ars Poetica; Tacitus; or Cicero: De Natura Deorum.

GREEK (4)—Plato: Phædo; History of Greek Philosophy.

GERMAN (4)—Schiller: Die Jungfrau von Orleans, Maria Stuart.

ASTRONOMY (5)—Newcomb and Holden's text-book, with lectures and use of Observatory.

CALCULUS (4)—Taylor's Differential and Integral, with applications to Geometry and Mechanics.

SECOND TERM

POLITICAL SCIENCE (5)—Andrews's Manual of the Constitution of the United States.

PHYSICS (4)—Hydrostatics, Pneumatics, Acoustics, Optics; Lectures.

ENGLISH (1)—Literature of the Nineteenth Century.

RHETORIC—Compositions and Orations.

And any one of the following studies:

GREEK (4)—Euripides: Bacchæ; Sophocles: Electra; Aristophanes: Frogs.

MARIETTA COLLEGE

FRENCH (4)—Grammar; *Petite Histoire du Peuple Francais*.

CALCULUS (4)—Text-book completed; Problems in Geometry and Mechanics, with Lectures.

THIRD TERM

PHYSICS (4)—Heat, Magnetism, Electricity; Lectures. (Five weeks).

BOTANY (4)—Gray's; Analysis of Plants. (Six weeks).

EVIDENCES OF CHRISTIANITY (5)—Peabody's Christianity and Science; Lectures.

RHETORIC—Compositions and Orations.

And any one of the following:

LATIN (4)—Lucretius; or Cicero: *De Officiis*.

FRENCH (4)—Selections from the Dramatists and Novelists.

DYNAMICS (4)—Tait and Steele's Dynamics of a Particle.

SENIOR YEAR

FIRST TERM

PEDAGOGICS (4)—Payne's Science and Art of Education. (Five weeks).

LOGIC (4)—Text-book and Lectures. (Ten weeks).

PSYCHOLOGY (5)—Porter's Elements of Intellectual Science.

CHEMISTRY (4)—Remsen's; Lectures; Laboratory Work.

RHETORIC (1)—Compositions, Orations, and Discussions.

BIBLE (1)—The Epistle to the Romans, through the year.

SECOND TERM

POLITICAL ECONOMY (5)—Text-book and Lectures.

PHILOSOPHY (4)—Moral Philosophy: Text-book; Lectures on the Sensibilities and the Will.

CHEMISTRY (4)—Text-book and Lectures. (First part of term).

GEOLOGY (4)—Dana's Text-book of Geology. (Last part of term).

RHETORIC (1)—Compositions, Orations, and Discussions.

SCHEDULE OF STUDIES

THIRD TERM

INTERNATIONAL LAW (4)—Woolsey's.

PHILOSOPHY (4)—Moral Philosophy, completed; Lectures on Grecian Ethics. (First half of term).

GEOLOGY (5)—Dana's Text-book continued. (First half of term).

ANALYTICAL CHEMISTRY (5)—Laboratory Practice. (Last half of term);

OR

POLITICAL SCIENCE (5)—

RHETORIC—Compositions, Orations and Discussions.

PHILOSOPHICAL COURSE

FRESHMAN YEAR

FIRST TERM, FIFTEEN WEEKS

LATIN (4)—Livy; Review of the Grammar; Roman History; Prose Composition. Sight Reading from Nepos.

GERMAN (5)—Goethe: Hermann und Dorothea, Goetz von Berlichingen; Lessing: Minna von Barnhelm.

MATHEMATICS (4)—Newcomb's Elements of Geometry, completed.

RHETORIC (1)—Kellogg's; Written Exercises and Declamations.

BIBLE (1)—Maclear's N. T. History and the Gospel of Mark, through the year.

SECOND TERM, TWELVE WEEKS

LATIN (4)—Livy; Horace: Odes (Books I and II); Nepos; Roman Antiquities; Prose Composition; Word Formation.

GERMAN (4)—Schiller: Historische Skizzen; Goethe: Egmont.

MATHEMATICS (5)—Part II of Newcomb's Algebra. Especial attention is given to the Theory of Equations and the Theory of Probabilities.

RHETORIC (1)—Kellogg's, continued; Compositions and Declamations.

MARIETTA COLLEGE

THIRD TERM, ELEVEN WEEKS

LATIN (5)—Horace: Odes (Books III and IV), Satires, and Epistles (Book I); Latin Synonyms; Roman Literature; Written Translations.

GERMAN (4)—Goethe: Faust, Part I; Andersen: Improvisatore.

MATHEMATICS (4)—Wentworth's Plane Trigonometry and Surveying.

RHETORIC (1)—Kellogg's, completed; Compositions and Declamations.

SOPHOMORE YEAR

FIRST TERM

PHYSIOLOGY (4)—Martin's "The Human Body."

HISTORY (4)—Fisher's Universal History.

MATHEMATICS (5)—Spherical Trigonometry; Wentworth's Analytic Geometry, begun.

ENGLISH (1)—English Literature; Period of Early English.

RHETORIC (1)—Compositions and Declamations.

BIBLE (1)—The Acts of the Apostles, through the year.

SECOND TERM

LATIN (5)—Plautus: The Captivi, Trinummus; Pliny or Juvenal; History of Roman Comedy.

HISTORY (4)—Greene's Short History of the English People.

MATHEMATICS (4)—Wentworth's Analytic Geometry, completed.

ENGLISH (1)—English Literature: Chaucer to Spenser.

RHETORIC—Compositions and Declamations.

THIRD TERM

PHYSICS (4)—Dana's Mechanics. Especial attention is given to Elementary Dynamics.

LANGUAGE (5)—History of the English Language; or German.

SCHEDULE OF STUDIES

MATHEMATICS (4)—Mensuration, and advanced Analytic Geometry.

ENGLISH (1)—English Literature: Elizabethan Period.

RHETORIC—Compositions and Declamations.

JUNIOR YEAR

FIRST TERM

ENGLISH (4)—English Literature: from Milton to Wordsworth.

RHETORIC (1)—Whately's; Compositions and Orations.

BIBLE (1)—The Gospel of John, through the year.

And any two of the following:

LATIN (4)—Horace: Epistles (Book II); Tacitus; or Cicero.

GERMAN (4)—Scientific German; or Lessing's Laocoon.

ASTRONOMY (5)—Text-book, with Lectures and use of Observatory.

SECOND TERM

POLITICAL SCIENCE (5)—Andrews's Manual of the Constitution.

PHYSICS (4)—Hydrostatics, Pneumatics, Acoustics, Optics; Lectures.

ENGLISH (1)—Literature of the Nineteenth Century.

RHETORIC—Compositions and Orations.

And either of the following:

FRENCH (4)—Grammar; *Petite Histoire du Peuple Francais*.

CALCULUS (4)—Text-book completed; Problems in Geometry and Mechanics, with Lectures.

THIRD TERM

PHYSICS (4)—Heat, Magnetism, Electricity; Lectures. (Five weeks).

BOTANY (4)—Gray's; Analysis of Plants. (Six weeks).

EVIDENCES OF CHRISTIANITY (5)—Peabody's Christianity and Science; Lectures.

MARIETTA COLLEGE

RHETORIC—Compositions and Orations.

And any one of the following:

LATIN (4)—Lucretius; or Cicero: De Officiis.

FRENCH (4)—Selections from the Dramatists and Novelists.

DYNAMICS (4)—Tait and Steele's Dynamics of a Particle.

SENIOR YEAR

FIRST TERM

PEDAGOGICS (4)—Payne's Science and Art of Education. (Five weeks).

LOGIC (4)—Text-book and Lectures. (Ten weeks).

PSYCHOLOGY (5)—Porter's Elements of Intellectual Science.

CHEMISTRY (4)—Remsen's; Lectures; Laboratory Work.

RHETORIC (1)—Compositions, Orations, and Discussions.

BIBLE (1)—The Epistle to the Romans, through the year.

SECOND TERM

POLITICAL ECONOMY (5)—Text-book and Lectures.

PHILOSOPHY (4)—Moral Philosophy: Text-book; Lectures on the Sensibilities and the Will.

CHEMISTRY (4)—Text-book and Lectures. (First part of term).

GEOLOGY (4)—Dana's Text-book of Geology. (Last part of term).

RHETORIC (1)—Compositions, Orations, and Discussions.

THIRD TERM

INTERNATIONAL LAW (4)—Woolsey's.

PHILOSOPHY (4)—Moral Philosophy, completed; Lectures on Grecian Ethics. (First half of term).

GEOLOGY (5)—Dana's Text-book continued. (First half of term).

ANALYTICAL CHEMISTRY (5)—Laboratory Practice. (Last half of term);
OR

POLITICAL SCIENCE (5)—

RHETORIC—Compositions, Orations and Discussions.

DEPARTMENTS OF INSTRUCTION

LATIN—PROFESSOR CHAMBERLIN

The course in Latin includes the study of several of the best Latin writers, Prose composition, Roman history, literature, and antiquities. In the Freshman year the time is divided about equally between Livy and Horace. In connection with the study of Livy special attention is given to etymology and syntax, that the student may fix more firmly his knowledge of the grammatical principles of the language already acquired in his preparatory course. The work in prose composition is also intended to promote this end, as well as to familiarize the student with the Latin order of thought. Roman history is reviewed with special reference to the period of the kings and that of the Punic wars. The principal events of the intervening period are assigned to the members of the class as subjects for individual investigation and presentation in the form of essays.

Grammatical drill is not neglected while reading Horace, but the study of word-formation and synonyms is made more prominent. Frequent written translations are required so that the student may have a better opportunity than in the class-room, to reproduce the thought and sentiment of Horace in the best English at his command.

Roman life, social and political in the days of Augustus, and Roman literature are subjects of collateral study during the last half of the year. Selections from Nepos and Catullus are used for translating at sight.

Plautus and Pliny or Juvenal are read in the winter

MARIETTA COLLEGE

term of the Sophomore year. In translating Plautus the student is urged to use as pure, idiomatic, conversational English as possible. Two plays are read: one, usually the *Trinummus*, at sight. The study of Plautus leads to the consideration of early Latin peculiarities of form and construction, the social life of the period, the development of the Roman drama, and its relation to modern dramatic literature.

Latin is an elective study in the first and third terms of the Junior year. Although the work will vary from year to year, that given in the foregoing course of study will indicate its general character. Students wishing to broaden their knowledge of Roman literature, will read rapidly from a number of authors selected from its different periods. Cicero and Lucretius will be read with special reference to ancient philosophy as embodied in their writings.

Students in this department should provide themselves with Harper's or White's Junior Student's Latin-English Lexicon, Smith's Classical Dictionary, Anthon's or Rich's Dictionary of Greek and Roman Antiquities, and Ginn and Company's Classical Atlas.

GREEK—PROFESSOR PHILLIPS

The required Greek of the classical course extends through the Freshman year and the first and third terms of the Sophomore year; in the Junior year the study is optional.

In the prescribed work the course is arranged with a view to acquiring first a facility in reading the easier authors at sight; and secondly an acquaintance with the im-

DEPARTMENTS OF INSTRUCTION

portant events of political and constitutional history, the most interesting facts of Greek private life, and an outline of the history of literature. In the elective course attention is directed to the dramatic and the philosophical literature and to the elements of archæology.

The authors read in the Freshman year are: Lysias, four orations,—Eratosthenes, Olive Trunk, Grain Dealers, Funeral Oration; Herodotus, story of the Persian Invasion—Selections from VI, VII, VIII, and IX; Thucydides, Book I. The characteristics of the different authors are pointed out; and a careful study of text, of syntax and word-formation, is combined with large practice in translation at sight. In order to a more thorough knowledge of the structure and idioms of the language, lessons in composition are given weekly throughout the year, and consist of written and oral translations from Sidgwick's Greek Prose Composition, Parts I and II. In connection with the authors a study is made of the outlines of history to the death of Alexander. Chapters from Grote's History of Greece and other authorities are specified for illustrative reading.

The first term of the Sophomore year is devoted mainly to Homer. Several consecutive books from the Odyssey or Iliad (for 1888 Od. V–XII) are read, and selections from other portions to show the structure of the poems. The Homeric Question with mythology, etc., and Homeric forms and syntax are commented on, and lectures given on the elements of philology and on the private and social life of the Greeks. In the third term Plato's Apology and Crito or Lyric Poets are read, with lessons on the history of literature.

The Junior elective course for 1888-89 will comprise,

MARIETTA COLLEGE

for the first term, Plato's *Phædo* with an outline of the history of Greek Philosophy; for the second term, the *Bacchæ* of Euripides, the *Electra* of Sophocles, the *Frogs* of Aristophanes, and lectures once a week on the history of Greek sculpture.

GERMAN—PROFESSORS CHAMBERLIN AND PHILLIPS

PHILOSOPHICAL COURSE

Students who wish to pursue the Philosophical Course should have a thorough knowledge of German grammar, and be able to translate easy German at sight, and to turn simple English into German with ease and accuracy. They will be required to continue the study through the Freshman year. The work of the year will consist of the reading of selections from Lessing, Goethe, Schiller, and other authors, study of the composition and derivation of words, and the history of the German language and literature, with its relation to English.

Recitations will be conducted in German, and the regular work will be supplemented by conversational exercises and sight reading. Whitney's Grammar is used for reference.

This year the class will read Goethe's *Goetz von Berlichingen*, *Hermann und Dorothea*, *Egmont*, *Faust*, Part I or Lessing's *Nathan der Weise*, Storm's *Immensee*, Lessing's *Minna von Barnhelm*, Schiller's *Historische Skizzen* (Buchheim's Ed.), Andersen's *Improvisatore*.

CLASSICAL COURSE

German is pursued as a required study in the second

DEPARTMENTS OF STUDY

and third terms of the Sophomore year. At this stage it is expected that students will be able to acquire rapidly the principles of the language and readiness in translation. After a few preliminary lessons, easy prose is taken up along with the grammar (Whitney's); etymology and word-formation are made prominent as a means of building up vocabulary; and, later, considerable time is given to rapid reading. The selections consist of easy stories from Grimm and Andersen, followed progressively by more difficult prose. The required course does not contemplate the study of German classic authors, but is designed to enable students to read ordinary German and to lay a foundation for the further study of the language and literature, for which opportunity is offered in the elective work of the Junior year.

FRENCH—PROFESSOR CHAMBERLIN

French is an elective study for the second and third terms of the Junior year. Instruction in this department is intended to aid the student in securing a reading knowledge of the language. Only so much of the grammar is taught as will facilitate fluency of translation. It is impossible to give a definite statement of the selections for reading, but they will be such as to give the student some conception of the beauty and variety of French literature. The following course is given as representative: Lacombe's *Petite Histoire du Peuple Francais*, About's *La Mere de la Marquise*, Dosia by Henry Greville, Moliere's *L'Avare*, Racine's *Athalie*, and Hugo's *Hernani*. Chardenal's *First French Course* is used as a text-book, and Whitney's *Practical French Grammar* and Harrison's *French Syn-*

MARIETTA COLLEGE

tax are recommended as works of reference. The history of the development of French from the Latin is briefly considered, and the principal laws of derivation are applied in determining the etymology of words. Special work will be assigned to any student who may have time and a desire to do more in this department than the regular class work.

MATHEMATICS AND ASTRONOMY

PROFESSOR MITCHELL

The first branch of Mathematics studied in the Freshman year is Geometry. Four lessons a week during the fall term of fifteen weeks are given to the subject, beginning with Book IV of Newcomb's Elements of Geometry. Particular attention is given to the numerous theorems for original demonstration by the student; and to a limited extent the student's power of investigation is brought out by being led to discover some simple theorems from assigned figures.

Algebra is pursued during the winter term with five lessons a week. The course begins with a thorough review of the subject of simultaneous equations, during which is given a brief description of determinants together with their relation to the subject in hand. Then the advanced course of Newcomb's text-book is pursued for the remainder of the term, especial prominence being given to the theory of probabilities and the general theory of equations.

The third term of eleven weeks is given to Plane Trigonometry and Surveying, as presented in Wentworth's

DEPARTMENTS OF INSTRUCTION

text-book. Each student has some practice in triangulation and in the measurement of areas, and considerable practice in drawing to scale.

In the Sophomore year, a short course in Spherical Trigonometry is given, sufficient to lead to the solution of some simple problems in geodesy, and to the intelligent study of mathematical astronomy.

The remainder of the fall term is spent upon Wentworth's text-book in Analytic Geometry. Lectures are given in connection with the straight line and the circle. When the conic sections are taken up, the class is divided into two divisions and an hour in the class room is given to each division. The method of individual study and instruction is then employed. Each student is urged to make as rapid progress as his time and ability will permit, and no student is allowed to pass over what he does not understand. The study is continued in the same way during the winter term, especial attention being given to the theorems for exercise in demonstration.

The third term of the Sophomore year is given to Elementary Mechanics. Dana's text-book is used, supplemented by lectures on some of the topics. The subject of projectiles is treated by lectures in such a way as to utilize the student's knowledge of analytic geometry. Especial effort is made to aid the student in acquiring accurate ideas of dynamics, and to this end he is questioned and encouraged to ask questions about the most common examples of force and motion.

In the Junior year, Mathematical studies are elective. For those students who elect the Calculus, the individual method of instruction will be employed. In the review, attention is devoted to the different ways of developing

MARIETTA COLLEGE

the fundamental theorems of this highest exemplification of mathematical analysis, and their logical relations are pointed out. It is expected that after two terms of study, with the solution of numerous exercises and problems in geometry and mechanics, the student will have a fair working knowledge of the subject, and will be prepared to enter upon the advanced study of mechanics and physics. As introductory to this advanced study, Tait and Steele's Dynamics of a Particle will be taken up the last term of the year.

ASTRONOMY comes in the fall term and the text-book used is Newcomb and Holden's. The students have the use of an excellent $6\frac{1}{4}$ inch telescope, equatorially mounted and furnished with a Bond spring-governor. The plan is to give each student as much practice in measurements with the transit, the sextant, and the telescope, as the weather and other circumstances will permit, together with the opportunity to become somewhat familiar with the telescopic appearance of the sun, the moon, the larger planets, and some prominent nebulae and star-clusters.

In the study of the text-book, especial prominence is given to the applications of spherical trigonometry, to Newton's demonstration from Kepler's Laws of the law of solar attraction, and to the methods of measuring the masses and distances in the solar system. It is conceived that the mastery of the steps which lead up to the inference of the Law of Universal Gravitation, the grandest of scientific conclusions, is of the highest educational value.

Toward the close of the term a course of lectures will be given on the physics of the stars, illustrated by maps of the solar and star spectra.

DEPARTMENTS OF INSTRUCTION

NATURAL SCIENCE—PROFESSOR BISCOE

PHYSICS

In the winter term of the Junior year the student takes up in regular course the study of Physics, beginning with Magnetism and Statical Electricity. The College is provided with a substantial outfit of electrical apparatus, suitable for lecture illustrations. All the important facts of electric action can be exhibited.

The plan of instruction provides for a thorough study of the subject by the student from his text-book in preparation for the daily recitation. It is felt that the object to be aimed at in these daily recitations is three-fold: (1) to make sure that the student shall be faithful and diligent in the use of his time allotted to study, which end is, in a measure, secured by the consciousness on the part of the student that his work is to be passed in review before his fellow-classmates and his instructor; (2) to reveal to each student the extent of his grasp of the subject, to lead him to see how far he can himself apply principles to the explanation of facts, when these are presented in new relations; (3) to make clear to the student things which are obscure, to give assistance when it is seen to be needed, to suggest the connecting steps leading from what he already knows to that which is unknown, and to give new information as it may seem called for.

These objects are attained through a close and careful questioning of each student in turn. The greatest freedom is encouraged in the statement of difficulties on the part of the student and all questions seeking further information secure careful attention.

MARIETTA COLLEGE

In connection with the review, lectures are given, designed to include all experiments previously studied in the text-book together with such additional matter as can be given in the time allotted.

Following these subjects, Hydrostatics, Pneumatics, and Acoustics are taken up and the same general plan of instruction is followed. These occupy the time (four exercises per week) through the winter term. One half the summer term (four exercises per week) is devoted to the study of Light, and one half the first term of the Senior year (five exercises per week) to the remaining topics of Physics, viz., Heat and Dynamic Electricity. The text-book used is Kimball's revision of Olmsted's College Philosophy.

PHYSIOLOGY

The course of study in Natural Science begins in the first term of the Sophomore year with Human Physiology. The anatomical structure of the body, as regards its more important organs, is illustrated by the dissection of the corresponding parts of the common domestic animals in the class room. As supplementary to such investigation, carefully prepared photographs of parts too difficult for class room dissection are projected on the screen with the calcium light. The instruction is given mainly in connection with regular recitations. "Martin's Human Body" is the text-book used. During the course, microscopic preparations of the important tissues are examined with the aid of a good, working microscope, made by Crouch of London, provided with suitable objectives, polariscope, etc.

DEPARTMENTS OF INSTRUCTION

BOTANY

Among the different Natural History Sciences in which description and classification hold so important a place, Botany furnishes the best opportunity for the study of the principles of classification as applied in natural science. The object of the course in Botany is to make the student familiar with the character of different representative plants, that the whole plan of classification may be comprehended, and he may gradually come to appreciate the value of different organs, as the basis of groupings of higher and lower orders, as parts of the general scheme. In attaining this end as much field work as possible is to be done by the student. The text-books used are Gray's. The study is taken up in the spring term of the Junior year. During the course the minute tissues will be examined with the microscope, and, by the aid of photographs and the optical lantern, a sketch of the lower ranks of the vegetable kingdom be given.

CHEMISTRY

Chemistry is taught both by text-book and laboratory exercises. Ample accommodations for individual work by the student are provided. The course includes: first, instruction in general Chemistry illustrated by experimental work, performed partly by the teacher and partly by the student; and, secondly, a course of qualitative analysis in which each student works by himself the actual analysis. The plan pursued secures first a knowledge of the general methods of qualitative analysis, and then practice is given in the determination of unknown solutions of one or more metals, followed by work on un-

MARIETTA COLLEGE

known substances in the solid condition. The general Chemistry occupies the equivalent of one term, though divided between the fall and winter terms. The analytical work occupies one half a term and is optional.

GEOLOGY

The course in Geology occupies the equivalent of one term. The mineralogical and geological collections of the College, furnish ample material for illustration. The cabinet is especially rich in specimens illustrating the petrology and paleontology of Ohio, having the collections made by Prof. E. B. Andrews, formerly in charge of this department, and later, on the Geological survey of the State. A large and finely arranged collection of modern shells is exceedingly valuable, both in its illustration of the molluscan sub-kingdom, and in the help it gives to an understanding of the paleontology of the Paleozoic rocks which constitute the strata of Ohio and the neighboring parts of adjacent states.

The college library contains all the general government reports on geology and most of the state reports, with their elaborate topographical and stratigraphical maps, and carefully executed plates illustrative of the fossils so abundant in the ancient life of our country.

PHILOSOPHY AND RHETORIC—PROFESSOR BEACH

INTELLECTUAL PHILOSOPHY

The work in this department runs nearly through the Senior year. It begins with the study of a text-book on the Intellect, usually Porter's Elements, with collateral

DEPARTMENTS OF INSTRUCTION

work in other authors, issuing in essays and discussions. The remaining parts of Psychology, those pertaining to Sensibility and Will, are usually presented in lectures with assignment of collateral work in various authors.

MORAL PHILOSOPHY

The work in Moral Science begins with a few lectures on the Knowledge of Moral Law, and is carried on by the study of a text-book on Theoretical and Practical Ethics. On the latter subject the effort is made to awaken interest by class discussions which may lead to wider reading and deeper reflection. This study is followed by a course of lectures on the History of Greek Ethical Philosophy.

ENGLISH LITERATURE

The aim in this department is three-fold: to furnish an outline of English Literature itself; to trace the historical development of that literature as part of the life of the English people; and to make such a beginning in the actual study of typical authors as shall be a discipline to the student as well as a stimulus and guide to future reading. To this end, the plan is to carry the study through a good part of the college course, with the hope that much of the reading done by the student, after the first year, may be collateral to this work.

RHETORIC

The work of Composition is introduced by the study of an elementary text-book in the Freshman year, accompanied by written and oral exercises illustrating the prin-

MARIETTA COLLEGE

ciples taught. After that, essays are required throughout the course, each student reading a composition in the class once a month. By the use of a more advanced text-book in the Junior year further instruction is given in Argumentative Composition and the Art of Oratory.

Each student is required to participate in the public Rhetorical exercises in the Chapel; the two lower classes speaking declamations and the upper classes written orations, with previous drill in each case. In the Senior year there are also class debates in which training in extemporaneous speaking is gained.

POLITICAL PHILOSOPHY—EX-PRESIDENT ANDREWS

The subjects of Civil Government, Political Economy, and International Law have held from the first a prominent place among the studies pursued at this institution. The idea has been that a fair knowledge of these branches was indispensable to the man of liberal education, preparing him measurably for the proper discharge of such public trusts as might be devolved upon him, furnishing him a foundation on which to build in subsequent years, and making him an interested observer of the social and political events of his time, as well as enabling him to understand and interpret these events for himself and others.

CIVIL GOVERNMENT

This subject is taken up in the second term of the Junior year, and five exercises a week are given to it. It is placed thus early in the course for the benefit of the

DEPARTMENTS OF INSTRUCTION

student in discussions and essays, which are so largely on subjects of a political and social character.

The general subject of government is approached through that of our own Nation, the Constitution of the United States being carefully studied in its principles as well as in the legislation in which they have been embodied. Large attention is given to the practical workings of the Constitution as shown in our governmental history. That the student should get a clear idea of the two-fold nature of our government, National and State, discriminating it from all others, is deemed of great importance.

POLITICAL ECONOMY

The Seniors devote five exercises a week to this subject during the second term. A text-book is used, but there is a free discussion of principles, and the student is encouraged to bring his own powers of thought to bear upon every point. The existence of economic laws is not believed to be incompatible with diversity of opinion as to questions of national polity. The class-room is not regarded as the proper place for the dogmatic spirit of the partisan that can see nothing of good in the other side. Supplementary lectures are given on special topics, in addition to the full commentary work—historical and illustrative—of the daily exercise. To the subject of money a series of lectures has been devoted, presenting fully its history as well as discussing its theory.

INTERNATIONAL LAW

The last term of the Senior year—five exercises a week—has been devoted to this subject. Though not as im-

MARIETTA COLLEGE

mediately practical as the others named, its influence on the mind of the student is elevating and healthful, bringing before him large questions and lifting him out of the range of the narrow and petty.

In the arrangement of work Dr. Andrews has also had charge of the instruction in Logic and in the History of Civilization, which two subjects have occupied the Seniors one exercise each day during the first term.

BIBLE STUDIES

The first recitation hour each Monday morning is devoted to the study of some portion of the New Testament. Students pursuing the Classical Course use the Greek text; other students use the English or German version. They also make use of Maclear's N. T. History during the Freshman and Sophomore years.

NOTE ON INSTRUCTION

The instruction in the four college classes is given wholly by permanent Professors. The preparatory work is kept separate, being done in the Academy by the Principal and his assistants; and the Professors are thus enabled to give their entire time to the collegiate work in their several departments.

All the classes are examined near the close of each term. The examinations are usually both oral and written.

The examination results are combined with the recitation averages in the determination of the grades. In making up these averages there is no preference of one

DEPARTMENTS OF INSTRUCTION

branch of study over another, but the estimate is made according to the time devoted to each study.

Reports of standing and punctuality will be sent to parents when requested.

LECTURES

1805849

In addition to the regular class-room instruction, lectures, open also to the public, are given on alternate Wednesday afternoons in the college chapel by members of the Faculty and other lecturers. Since the publication of the Catalogue for 1886-1887 the following lectures have been delivered:

The Netherlands and the Reformation	REV. C. E. DICKINSON
Religion and Politics	REV. W. J. COLEMAN
Temperance and Freedom	REV. H. C. HASKELL
Primitive Man	REV. G. R. GEAR
The Existence and Personality of God	REV. DR. BOYD
The Centennial Celebration at Philadelphia of the Adoption of the Constitution	DR. ANDREWS
Lucretius and Epicureanism	PROFESSOR CHAMBERLIN
Confucius	REV. CHARLES A. STANLEY
The Reading of English Literature in College	DR. BEACH
Books and Our Use of Them	PRESIDENT EATON
Eyes, Their Structure and Development in the Animal Kingdom	PROFESSOR BISCOE
The Stars	PROFESSOR MITCHELL
Archæology	PROFESSOR PHILLIPS

GRADUATE STUDY

Arrangements have been made to meet an increasing demand for admission to graduate courses, and applicants have already entered upon the work. In the case of non-resident students, three years of study, completing a course marked out by the Faculty and pursued under their direction, together with the presentation of a satisfactory Thesis, entitles college graduates to enter an examination on the same for the degree of Doctor of Philosophy. Three years is the minimum time required of non-resident candidates, and in the case of students not well prepared to enter on a chosen course, or whose occupation is too exacting, the term of candidacy will need to be prolonged.

It is understood that the degree will be given only on the ground of high attainment in some branch of knowledge, manifested both by examinations and by a thesis showing original investigation or original treatment of a subject.

For Alumni of Marietta, the oversight of such work, the examinations, and the diploma will be without expense except a matriculation fee of ten dollars. To others an additional fee of twenty-five dollars will be charged.

When regular instruction is desired, moderate charges will be made according to the amount of instruction.

GENERAL INFORMATION

LOCATION

The College is located at Marietta, at the mouth of the Muskingum, where the first settlement of the "Territory northwest of the river Ohio" was made on the seventh of April, 1788. The institution was founded by the sons of the pioneers, among whom were an unusual number of men of liberal education. It is accessible by steamers on the Ohio and Muskingum rivers and by the Cincinnati, Washington & Baltimore, the Baltimore & Ohio, the Cleveland & Marietta, the Ohio River, the Marietta, Columbus & Northern, the Wheeling & Lake Erie and the Zanesville & Ohio River Railroads.

WORSHIP

Prayers are attended every morning in the College Chapel, when all the students are required to be present.

On the Sabbath the students worship with the people of the city, each student attending regularly such one of the churches as his parents or guardian may select.

PUNCTUALITY

The amount of work required of the student is sufficient to occupy him every day from the beginning of

MARIETTA COLLEGE

the session to its close. Any absence, therefore, for whatever reason, causes a serious loss to the student, and excuses cannot be granted except in cases of unavoidable absence. The good of each student, as well as the interests of the College as a whole, makes the rule of punctuality imperative.

The attention of parents and guardians is especially called to the importance of seeing that the student is not delayed in his return at the beginning of the term, and that he is not interrupted by absence during term time save for the most urgent reasons. Nor must self-imposed work be allowed to interfere with college duties.

PUBLIC BUILDINGS

The College occupies an entire square in a retired and quiet part of Marietta, and yet is within a short distance of the Post Office and the business portion of the city. On the grounds are four buildings erected for the various purposes of the institution.

The Dormitory building has some thirty rooms for the use of students. The Greek Recitation Room is in this building; also the Room of the Young Men's Christian Association.

The Central building has a Laboratory, Mathematical Room, the President's Recitation Room, the Latin Room, the Rhetorical Room, "Hildreth Cabinet," "Slocomb Hall," and the Halls of the Alpha Kappa and Psi Gamma Societies.

The "Hildreth Cabinet" contains the various collections of minerals, shells, etc., made by the late Dr. S. P. Hildreth, and presented by him to the College.

GENERAL INFORMATION

The collections of minerals, shells, fossils, etc., etc., are large and valuable. In the cabinet is a large meteoric stone, one of the four or five largest known to exist.

The first story of the North building—erected by the former students of the College—is occupied as a Chapel, and by the two Literary Societies for their Libraries. The two Library Rooms are fitted up and furnished with much taste.

The whole of the second story is for the College Library, the room being seventy-five feet by forty-eight feet, and twenty feet high. There are twenty-five alcoves, each lighted by its own window.

The preparatory Department occupies a separate building. It contains, besides the large room used for study and recitations by the Principal, a number of smaller recitation rooms, a hall for the Academy Literary Society, and a number of lodging rooms for students.

THE LIBRARIES

The various libraries of the College contain over 40,000 volumes of well selected books. In the department of American history, particularly that of Ohio, the library is very valuable; and when enriched by certain other collections of books, pamphlets, and manuscripts, in accordance with the expressed purpose of their owners, it will have few equals in this department.

The College Library is open on week days to students and to the public from eight to eleven and from one to half-past three. One alcove is provided with standard reference books which are always accessible, and the tables are supplied with numerous magazines and newspapers.

MARIETTA COLLEGE

LITERARY SOCIETIES

There are two Literary Societies—the Alpha Kappa and Psi Gamma. These Societies have commodious and handsomely furnished Halls, and large and well selected Libraries, the two containing 11,000 volumes. Their exercises, consisting of debates, orations—written and extemporaneous—and declamations, together with their public representation, and their practice in the work of organizing a deliberative assembly and carrying on its proceedings—a training of rapidly increasing importance—constitute one of the most important features of the College course.

Y. M. C. A.

Early in the history of the College the Christian students organized the Society of Inquiry. Its object was to increase the interest in Missions and to do religious work. Precious revivals were experienced, and among prominent laborers in mission fields are to be found the names of some of Marietta's Alumni.

In 1884 the Society of Inquiry changed its constitution for that of a College Y. M. C. A. The Association has steadily increased in numbers and its members have felt a deeper interest in religious work. In 1885 pleasant rooms on the first floor of South Hall were fitted up tastefully by the Association, in which its regular meetings are held.

Every Monday evening a half hour prayer meeting is held, which is missionary in character once each month. On Friday evening an Academy prayer meeting is held in the Y. M. C. A. rooms.

GENERAL INFORMATION

ALUMNI ASSOCIATIONS

The general Alumni Association occupies Tuesday of commencement week, with its annual meeting, address, poem, and dinner. The officers for the current year are as follows:—President, Rev. Chas. Little, D. D.; Vice President, Gen. R. R. Dawes; Recording Secretary, Prof. O. H. Mitchell; Corresponding Secretary and Treasurer, S. J. Hathaway; Executive Committee, John Mills, Esq., Principal M. R. Andrews, Supt. C. K. Wells.

THE MARIETTA COLLEGE CLUB OF CINCINNATI holds its annual reunion in January, and has been active and liberal in promoting the interests of the College. Its officers for the current year are:—President, Wm. B. Thomas, Esq.; Vice President, L. W. Gilliland, Esq.; Secretary, Frank W. Follett, Esq.; Treasurer, Chas. E. Rehm, Esq.; Historian, Rev. John Rusk.

EXPENSES

The tuition averages fifteen dollars a term. Room rent is from ten to fifteen dollars a year for each occupant. The rooms are not furnished except with stoves or grates. For use of the library and for warming and care of public rooms, the cost is from six to eight dollars a year. At present prices of coal, the cost of fuel is about five dollars a year where two students occupy a room.

The price of table board at boarding houses varies from two dollars and a quarter to three dollars a week. Board in clubs may be obtained at a dollar and seventy-five cents. Furnished rooms, in private families, with board, may be had for from three to five dollars a week.

The College term bills are payable in advance, at the

MARIETTA COLLEGE

beginning of each term. When a student retains his standing no deduction is made for absence.

PECUNIARY AID

Experience has shown that young men of good character and ability, determined to get an education, are very seldom compelled to leave college for lack of means.

Students in preparation for the Christian ministry, whose circumstances require it, receive aid sufficient to pay their tuition and room rent from funds given to the College for that purpose.

The American Education Society and the Presbyterian Board of Education make appropriations to college students of this class.

The College desires to encourage capable and deserving young men in their efforts to secure a thorough education, and the means of doing this, by loan or gift, has been furnished to a limited extent. The trustees would be glad to be furnished with the means of aiding a larger number of such students.

All bequests to the College or Academy should be made payable to the TRUSTEES OF MARIETTA COLLEGE.

SCHOLARSHIPS

The following Scholarships have been endowed by benevolent persons on a foundation of \$1,000 each. They are for the most part in the gift of the College, and entitle the occupants to tuition without charge:

KEYS SCHOLARSHIPS, five in number, by bequest of

GENERAL INFORMATION

Mrs. Mary Keys, of Columbus, for students preparing for the ministry.

MORGAN SCHOLARSHIPS, four in number, by bequest of Samuel C. Morgan, Esq., and Mrs. Francis A. Morgan, of Norwich, Conn.

HAMILTON SCHOLARSHIPS, two in number, by Robert Hamilton, Esq., and Mrs. R. B. Hamilton, of Hanging Rock.

WILCOX SCHOLARSHIP, by Loyal Wilcox, Esq., of Hartford, Conn.

SMITH SCHOLARSHIP, by Winthrop B. Smith, Esq., of Philadelphia.

HINKLE SCHOLARSHIP, by Anthony H. Hinkle, Esq., of Cincinnati.

WICKES SCHOLARSHIP, by Wm. W. Wickes, Esq., of Brooklyn, New York.

A SCHOLARSHIP by two gentlemen of Portsmouth.

BREED SCHOLARSHIP, by W. J. Breed, Esq., of Cincinnati.

HOPKINS SCHOLARSHIP, by L. C. Hopkins, Esq., of Cincinnati.

SCHAFER SCHOLARSHIP, by Wm. Schaffer, Esq., of Cincinnati.

WHITE SCHOLARSHIP, by R. M. White, Esq., of Cincinnati.

FIELD SCHOLARSHIP, by John Field, Esq., of Arlington, Mass.

LOCKWOOD SCHOLARSHIP, by Le Grand Lockwood, Esq., of New York City.

CALHOUN SCHOLARSHIP, by John C. Calhoun, Esq., of New York City.

MARIETTA COLLEGE

LORD SCHOLARSHIP, by Dr. and Mrs. A. D. Lord, of Batavia, N. Y.

SCHOLARSHIP of Class of 1871, by the Class of that year.

SCHOLARSHIP of Class of 1843, by members of the Class.

BROWN MEMORIAL SCHOLARSHIP, by the friends of Mrs. Susan M. Brown, of Zanesville.

BOSWORTH SCHOLARSHIP, by Marcus Bosworth, Esq., of Middleport.

MILLS SCHOLARSHIP, by Mrs. Col. John Mills, of Marietta.

ORRIS SCHOLARSHIP, by a gentleman of New York City.

ELDRIDGE SCHOLARSHIP, by the children of the late Rev. Joseph Eldridge, D. D., of Norfolk, Conn.

ELLENOR COOK SCHOLARSHIP, by bequest of Mrs. Cook, of Newport.

ALDERMAN SCHOLARSHIP, by E. R. Alderman, Esq., of Marietta.

WELLS SCHOLARSHIP, by M. P. Wells, Esq., of Marietta.

ANDREWS SCHOLARSHIP, by the Alpha Digamma Fraternity of Marietta College.

SCHOLARSHIP in memory of Charles B. Gates.

CUTLER SCHOLARSHIP, by Major Ephraim Cutler Dawes, of Cincinnati.

ROSSETER MEMORIAL SCHOLARSHIP.

PUTNAM SCHOLARSHIPS

In the will of the late Hon. William Rufus Putnam, a bequest was made to the College for the purpose of pro-

GENERAL INFORMATION

viding free tuition to meritorious students of narrow means. As the nominal tuition fee is far below the actual cost, the bequest provides that for each hundred dollars of net annual income, free tuition is to be given to one student. Other things being equal, preference will be given to the sons of clergymen. The bequest is at present available only in part.

Assistance in any of the forms mentioned above will not be continued in the case of students who incur serious College censure, or who fail to maintain a reputable scholarship.

PRIZES

FOR GENERAL SCHOLARSHIP:—The Kingsbury prize, founded by J. Munro Brown, Esq., of New York City, and named in honor of Rev. Addison Kingsbury, D. D., of Marietta, amounting to sixty dollars a year, is given to the two students of the Senior class who have maintained the highest general standing during the previous College year. One-third is paid at the beginning of each term.

The Hyde Prize, founded by the Hon. Wm. Hyde, of Ware, Mass., amounting to the same sum, is given in like manner to the two most meritorious members of the Junior class.

A like sum may be expected to be given to the two members of the Sophomore class whose merit during the previous year has been the highest.

THE SENIOR ENGLISH LITERATURE PRIZE:—The class of 1876 have founded a prize of sixty dollars a year, to be given to those two members of the Senior class who shall before graduation manifest by an examination the

MARIETTA COLLEGE

widest and most thorough reading of English Literature.

JUNIOR RHETORICAL PRIZES:—The sum of forty dollars is divided between three members of the Junior class for excellence in the Rhetorical Department; one-third of the class being chosen, according to the standing in the department during the year, to compete for prizes by presenting essays on subjects assigned.

PRIZES FOR DECLAMATION:—Small prizes are given to two members of each of the Sophomore and Freshman classes for excellence in Declamation. The four members of each of these classes whose grade in this department during the year has been the highest, compete for these prizes at a public exhibition near the close of the College year.

THE FRESHMAN ENTRANCE PRIZE:—A prize of fifty dollars a year has been founded by the Marietta College Club of Cincinnati, to be given to those two students who shall pass the best examination for entrance to the Freshman class. This prize is made payable in January.

LIST OF STUDENTS

SENIORS

Candidates for the Degree of B. A.

WILLIAM BARNES ADDY	Marietta	Rev. Dr. Addy's.
WILLIAM GREENWOOD BEACH	Marietta	Prof. Beach's.
WILLIAM HENRY FANKHAUSER	Round Bottom	21 N. H.
CLARENCE MERRILL HUMES	Marietta	Mr. W. A. Humes's.
ADDISON KINGSBURY	Marietta	Rev. Dr. Kingsbury's.

PREPARATORY DEPARTMENT

GENERAL STATEMENT

This department, known as the Marietta Academy, is under the supervision of the Faculty.

While the first object of this Academy is to prepare students for College, it presents many advantages to those who are desirous of a shorter course. There are instructors enough to attend to the special needs of each student. Pupils of district schools who have done well in English studies, can, if they wish, devote their entire time to those classical studies in which they have had no previous instruction. They can thus prepare for College in much less time than is prescribed for the entire preparatory course. Among the most successful students have been a few who have pursued their studies in this way.

The Faculty of the College are ever ready to give assistance and instruction.

The libraries, containing more than forty thousand volumes, the museum, and the laboratory are all available for instruction in the Academy.

Students in the Academy can procure unfurnished rooms in the Dormitory at about ten dollars a year.

The tuition (at the rate of thirty dollars a year) is far below the actual cost.

It is better to begin with a term, but pupils will be re-

PREPARATORY DEPARTMENT

ceived at any time. Special assistance will be given to those who desire to teach a part of each year, and no pains will be spared to help those who are willing to help themselves.

As far as possible the plan pursued in the best schools of Germany has been adopted; the recitation hours are really made the most important hours of study. Thus the pupil is trained not only in the subject, but also in the manner and methods of study. This plan is much more expensive than the old, for it demands a larger teaching force, but it has been adopted from the conviction that it will be better for the student.

COURSE OF STUDY

FIRST YEAR

Allen and Greenough's Latin Grammar; Beginner's Latin Book (Collar and Daniell), Allen and Greenough's Cæsar begun.

White's Complete Arithmetic.

Harvey's English Grammar.

American History.

History of England.

Physical Geography.

SECOND YEAR

Allen and Greenough's Cæsar, four books; Cicero, seven orations.

Newcomb's Algebra, through Quadratic Equations.

Creighton's History of Rome.

Goodwin's Greek Grammar; Phillpott's Selections from Xenophon.

Norton's Elements of Physics.

Worman's First German Book.

Eclectic German Reader.

MARIETTA COLLEGE

THIRD YEAR

Allen and Greenough's Aeneid, six books; review of Latin Grammar in connection with Tetlow's Latin Lessons.

Xenophon's Anabasis, three books; Greek Prose Composition; Iliad, one book, or Selections from Hellenica.

Pyffe's History of Greece.

Newcomb's Elements of Geometry, first three books.

Whitney's German Grammar, Eclectic German Readers, Mary Stuart, William Tell, Exercise in Reading at Sight.

Exercise in Reading, Spelling, Composition, and Declamation throughout the course.

Those wishing to prepare for the Philosophical Course in College will pursue the same duties as for the Classical Course, with the exception of the Greek, in place of which will be substituted in the second and third years those branches mentioned below the others in the foregoing scheme.

A class in Elementary Book-keeping is open to such as are prepared for it.

The Academy Literary Society meets on Saturday at 8 A. M.

The Academy Prayer Meeting is held on Friday, at 7 P. M., in the hall of the Young Men's Christian Association.

LIST OF STUDENTS

"A" CLASS

ARTHUR ROCKWELL ADDY	Marietta
ARTHUR DEVOL BARKER	Marietta
ALBERT NOBLE BATE	Bate
HENRY GREENE BLISH	Windsor, N. Y.

ORATION BEFORE THE PHI BETA KAPPA SOCIETY

DELIVERED JUNE 28, 1887

BY

PROFESSOR J. H. CHAMBERLIN

THE GENESIS OF LITERATURE

However inadequate the treatment, our theme cannot fail to enlist the earnest attention of all members of the Society under whose auspices we are gathered, and I trust it will not be wholly void of interest to all others who have tasted the delicious fruit of poesy and the more substantial nourishment which prose literature furnishes.

Language and literature, like civilization, are growths or developments. As the historian has established this fact in regard to civilization, so the philologist has performed the same valuable service for language. Although the oldest specimens of literature which have escaped oblivion are masterpieces of their kind, no reflective mind can entertain the belief that literature burst suddenly forth upon the world in all its beauty and perfection, like Pallas Athene full-armed from the head of great Jove. The Iliad was not the first literary production among the Greeks, nor the Vedic hymns the first among the ancient Indians. These have come down to us in accordance with

MARIETTA COLLEGE

the law of the survival of the fittest. The literary efforts that preceded them, are, unfortunately, with a few exceptions, lost to us, but they served their time and did their part in preparing for the golden age to follow. As specimens of literature those that remain are valueless; as memorials of man's earliest artistic efforts they are priceless.

What then is the source of literature? What the means and agencies involved in its production? What the methods and processes employed by man in his long and toilsome struggle to realize that "happy, heavenly vision men call Art?" How was man, formed from the dust of the earth, transformed into a poet, the made into a maker, the created into a creator?

Unquestionably poetry was the earliest of literary forms. Later, when the thought expressed was of greater interest than the language in which it was embodied, prose was employed. The subject to which I invite your attention this evening thus resolves itself into the Genesis of Poetry. A historical treatment of such a topic is forbidden by its very nature. At the same time we are not left entirely to theory and hypothesis. Some of the principles of language growth are clearly established. Certain mental qualities are recognized as characteristic of man in his uncivilized condition. The songs of our American Indians and other barbarous peoples bear witness to the earliest strivings of the human mind to express itself in rythmical language. With such aids as these, and inferences legitimately drawn from them, we may, so to speak, construct the history of verbal expression from its rude beginnings until the literary period was reached.

Although he was the crowning work of creation, prim-

PHI BETA KAPPA ORATION

itive man had more in common with the beasts that peopled the forests through which he roamed in his search for nuts and berries, or that disputed with him the possession of a cave, his only shelter from the driving storm, than with civilized man; with a Newton or a Shakespeare. In many respects he was their inferior. He had not the strength of the lion the speed of the deer, nor the melodious song of the bird. His voice gave utterance only to hoarse gutturals, sharp cries and wild shouts; his means of defense a stone or a club.

Why then was he entitled to the high honor of the supreme in creation? Because in him, if not in the scientists primitive egg, was contained the promise and potency of lordship over nature, of unlimited spiritual growth and development, of civilization with all its causes and results. Such is the being we are to examine for traces of a literary impulse or bias. Careful study will show that he possessed the germs of the powers and faculties necessary for the production of literature, the richest fruitage of his spiritual nature.

But as preliminary to our investigation it will be necessary to inquire what literature implies; what is requisite for its creation. We use the term literature in its ordinary sense of polite literature, belles-lettres, but in a more restricted sense than as used by an English critic who defines literature as "the written thoughts and feelings of intelligent men and women, arranged in a way that will give pleasure to the reader." A newspaper editorial on some topic of transient interest, or a treatise on the nervous ganglia of centipedes might fulfill all these conditions. Literature proper includes only works of taste, writings possessing ornamentation and beauty of style, that is, it is

MARIETTA COLLEGE

artistic and gives pleasure to the reader because of this quality as well as by reason of its content.

For the production of such literature, three elements or agencies are essential. These, though in a sense inseparable or involved in one another, are nevertheless distinct.

Before a literature can exist there must be something worthy of artistic expression, some inspiring thought, some noble deed, some soul-stirring emotion. There must be, in the second place, some suitable medium of expression, that is a word-language in a developed and mature state. And thirdly, some competent agent of expression, a writer or author as he is called. In other words literary material, a literary language, and a literary artist. These do not always co-exist. A people may have myths and legends suitable for poetic treatment, but have neither literary men nor a language sufficiently tractable to be used in poetic composition. I need not stop to justify this statement to an audience as familiar as this one is with Longfellow's *Hiawatha*. The Dakotahs were doubtless noble savages but not poets. And even had there been a Milton among them he must forever have remained "mute and inglorious," for his language was not the language of song. While we may not be able to conceive of a people with a literary language and literary impulses, destitute of literary themes, nor of one having literary themes and a literary language who had never been favored with literary artists, we fully recognize the fact that the three are distinct agencies in the production of literature, and that it is by the combination of all and not of a part of these that the desired result is obtained; just as the chemical, the heat and the color ray, are all included in the white ray and are inherent in its very nature.

PHI BETA KAPPA ORATION

If we study the character and endowments of primitive man, even as represented by the most degraded human beings of which we have any knowledge, we shall find that he possessed the rude beginnings of these three literary elements.

Man's needs and desires early taught him to make use of his vocal organs. He thus created a rudimentary language; a literary language in embryo. He thought also. Not as the philosopher or the poet thinks, for his mind acted feebly, sluggishly; but he had thoughts, feelings, emotions, experiences. These were literary material in embryo. And furthermore our examination will show that he was endowed with a peculiarity which still further differentiated him from the lower animals, and gave evidence of a literary artist in embryo. This unique characteristic was a *fondness for noise*. Instead of noise I might say *sound*. It would *sound* better, but would not be so accurate or expressive. The sweet song of the lark or the nightingale, the ceaseless roar of the cataract, the sighing of the wind in the forest, or the sound of the surging sea stirred no emotions sad or pleasant in his untutored soul. For pure sound as such he did not care; but pure noise, discordant, deafening, diabolical, was his delight.

If any one does not assent to the proposition that man in a state of nature is fond of noise, I could readily believe that he never gave his boy a drum or even a tin horn for a birthday present. No other animal shows this peculiarity. Some one may think that his neighbors' dogs and cats, which oftentimes make night hideous, should be excepted from this statement. But even granting that these rude disturbers of night's sweet silence find pleasure in their howlings and miaulings, it is to be regarded as a

MARIETTA COLLEGE

result of domestication and association with man rather than as a natural canine or feline trait. The lion does not roar because he enjoys the sound of his own voice; nor does it seem to afford pleasure to other animals. The bird may delight to pour forth its melodious lay, or the mouse be charmed by the soft tones of an instrument; but it is music or song that thus agreeably affects them. Not so uncultured man. The fierce beating of drums, the wild shouts and unearthly yells at the Indian war-dance or the bacchanalian orgies are to him more pleasing than the light strains of the harp or the deep tones of the organ, and exert a strange, almost fascinating influence over participants and non-participants; and not simply because this uproar is expressive of feelings which they have experienced with pleasure, but because noise in itself exerts a subtle power over the uncultured mind and heart. Had it been otherwise there could have been no music, no poetry, perhaps no literature. For this peculiarity developed into time and tune, two essential elements in poetry as well as in music.

In harmony with what has been said we will seek to trace the genesis of literature in the growth of language and of the artistic faculty. These are parallel lines of ascent; agencies mutually interactive. We cannot determine the influence of one upon the other, nor assign to each its due meed of honor in effecting the final result. Nor in giving these the preeminence, would we ignore man's intellectual and spiritual enlargement in every direction in its relation to literature. Whatever tended to develope, ennoble, civilize, idealize man, physiologically and scientifically speaking, whatever tended to produce enlargement of the cerebrum, and to multiply and deepen

PHI BETA KAPPA ORATION

its irregular creases and furrows, in a word, all the means and agencies that operated through long ages to raise man from his primal barbarism to that high estate in which he is justly called the "beauty of the world! the paragon of animals! so noble in reason, so infinite in faculties! in apprehension so like a god!" each and all of these influences contributed to the genesis of literature. But time forbids our speaking of them in detail. We shall content ourselves with following through that immense and almost trackless region that separates the savage from the man of letters, the two lines of development already indicated, the artistic and the linguistic.

In considering the former we must confine ourselves chiefly to the musical and poetic arts, never forgetful however of the other members of the aesthetic family we call Art, and their influence upon these two.

It has been said that poetry and music had their origin in "dance and march." Whether this statement be true or false, there can be no question as to their common origin. They were twin sisters, and during the long period of their minority lived together in harmony, or more strictly speaking, without harmony, and in mutual dependence. They had not yet parted company at the dawn of the literary age, and still remain united in lyric song. That they were in any sense natural gifts to man, few, if any, will maintain. Even the statement of Dr. Brown, that a "natural passion for melody and dance, which necessarily throws the accompanying song into a correspondent rhythm," is found to be "universally predominant in savage life," can be true only in regard to the more advanced stages of barbarism. Primitive man was incapable of producing or appreciating either melody or

MARIETTA COLLEGE

rythm. His vocal organs were very imperfect in structure, inflexible, unmanageable, and with very limited range. The sounds issuing from them were harsh, discordant ejaculations, most frequently composed of incongruous elements. Constant use of these organs rendered them more pliant and the vibrations more harmonious; the resulting sounds became less and less discordant. Pure tones began to replace those that had been mixed and unmusical. In process of time the ear was able to mark the distinctions between the impure and the pure tones, and to find the latter more agreeable. Effort would then naturally be put forth to gratify this incipient pleasure. Some tone or combination more pleasant than the rest would be indefinitely repeated, and then additions would be made. Who has not observed a child passing this stage of its mental growth?

That barbarians are fond of repeating the same sound or group of sounds is very evident from their war cries. Take for example some used by certain African tribes. One is Ooh-hu-hu! thrice repeated. Another, Bo-bo, bo-bo, bo-bo-o-o-oh! or varied a little, Bo-bo-bo-bo, Bo-bo-bo-bo-o-o-oh! And still another, Yaha-ha-ha, Ya Bangala! Ya Bangala! Yaha-ha-ha.

A different kind of war-shout is that of the Waganda tribes. This begins with the full titles of their chiefs and ends with a repetition of the last syllables. For example, Mukavya, kavya, kavya. Chamburango, angoo, angoo. Sekibobo, bobo, bobo.

Lullabies and ululations furnish further illustrations. A death dirge of the Senel of California will serve as an example of these. Its vowel variation is noteworthy and indicates an advance upon the simpler war-cries, and if

PHI BETA KAPPA ORATION

properly intoned would undoubtedly be quite affecting. It runs as follows:

Hel-le-li-ly

Hel-lel-lo

Hel-lel-lu.

In all these illustrations the tones are produced by regular vibrations, the disagreeable elements having been eliminated. The ear is not offended with sounds produced by irregular and mixed vibrations, clashing with one another and resulting in noise as distinguished from pure sounds. These do not represent man in his lowest, most primitive condition. The tribal stage has been reached, and there is something of social and political organization. It is not implied that war-cries, ululations and lullabies actually preceded the formation and use of words. They are used only as illustrations of the early processes of language development. As men advanced in civilization and could give better expression to better ideas, connected speech was substituted for syllables without significance, and for isolated words. The tendency to repeat a word of agreeable sound, or words of similar sound is seen in all periods of literature. That it indicates the first faint pulsations of the literary faculty is very evident from the songs of primitive peoples. Those of our American Indians frequently consist of only a few words. Thus hunting parties sing in chorus, Nyah eh wa! repeating the words indefinitely and accompanying their singing with rattles.

When the wild-cat becomes lonesome and longs for the society of the white rabbit, the Indians imagine that he repeats or sings this song:

He gah yah neh

MARIETTA COLLEGE

He gah yah! He gah yah.

Di ho ni shu gua da-se

He gah yah.

The meaning of all this is simply: "When you are frightened sweet rabbit you run in a circle."

The "medicine man" his poetic eye in a "fine frenzy rolling" says:

This mysterious medicine I take

This mysterious medicine I take

May this man mysteriously recover.

The following Chippewa love-song will also serve as another illustration, although it contains more substance, and a greater number of words:

Wi ha ya dinawido

Wi ha ya dinawido

Ki awa-we

Wi ha ya dinawido

Wi ha ya dinawido

Ki awa-we-yo

Ozam gosha kiwawa nishkom

E do

Kikona ninga nadin

Kikona ninga nadin

Gosha we go.

This poetical effusion expresses (for I beg to be excused from translating it) the injured feelings of some noble youth of the tribe, whose aesthetic nature had been sorely tried because his sweetheart persisted in walking with her toes turned in too much.

Longfellow, with the true poet's skill and quick perception of the fitness of things, has imitated this tendency to repetition in his *Song of Hiawatha*. You will at once

PHI BETA KAPPA ORATION

recall some of the clusters of slightly varying lines with which it is crowded. I quote one which occurs near the beginning of the poem:

O my children! my poor children!
Listen to the words of wisdom,
Listen to the words of warning,
From the lips of the Great Spirit,
From the Master of Life who made you!
I have given you lands to hunt in,
I have given you streams to fish in,
I have given you bear and bison,
I have given you roe and reindeer,
I have given you brant and beaver,
Filled the marshes full of wild-fowl,
Filled the rivers full of fishes;
Why then are you not contented?
Why then will you hunt each other?

Every reader has been conscious of the weird effect of this peculiarity of the poem though he may not have stopped to explain it. Had an inferior poet attempted what Longfellow accomplished so successfully, he would have produced only a monotonous caricature. Traces of this characteristic of the earliest compositions, of "rusticity" as Horace would say, "remained for a long time and still remain." They are found in choruses and refrains, in assonances and alliterations. Early Anglo-Saxon poetry had neither rhyme nor rhythm. Its form was based upon alliteration. The repetitious style of early Hebrew poetry is in perfect harmony with this principle. The negro songs of the South might also be cited in further illustration of this point.

But the repetition of the same word or group of words does not constitute literature, far removed as these may be from harsh tones and jangling noises. Other elements

MARIETTA COLLEGE

are necessary. Rhythm is the controlling influence in poetry and not without large influence on prose. We must therefore inquire into its nature, origin and growth.

An able writer makes the statement that "rhythm and metre, are, in fact, a remnant of the dance which once formed an integral portion of poetry and music." This implies that rhythm of motion preceded rhythm of sound and language. An interesting fact if true. We know that the dance, that is, bodily movement, was a regular accompaniment of music and song in their rude beginnings. And perhaps it is right to say that it was an "integral part" of them, inasmuch as dance, song and music together formed only a wild medley which would not bear disintegration. But still the nature and origin of rhythm are unexplained. We must analyze it more carefully. The two factors of which it is composed are time and accent. The latter, which has exerted so marked an influence upon the growth of language, will be referred to under the second general division of our subject. The former claims our attention at this point.

The power to mark regular short intervals of time, whether by clapping the hands, stamping the feet, or by regular movements backwards and forwards, is early manifest in the history of civilization. The oldest musical instruments are with good reason believed to have been instruments of percussion: drums, cymbals, bells; instruments with which to gratify man's innate love of noise. Wind and stringed instruments were devised later. That is, first time, then tune; first regularity of tone, then variety, or variation of pitch. Not that the faculty or organ of time was called into action before that of tune. Very possibly the opposite of this was true. But it de-

PHI BETA KAPPA ORATION

veloped more rapidly. Drumming was no doubt the first—music shall I call it?—made by man; the drum his first *un*musical instrument. Whatever musical effect is produced by drumming results from a regular, or regularly irregular, repetition of the same sound. This marks one of the first steps in the development of the musical faculty. When man learned to drum, instead of beating his instrument furiously, he had made one step of progress toward the perception and enjoyment of perfect harmony.

Instead of din and discord we now have regular recurrence of tone. Noise changed by the introduction of the time element into agreeable sound. The next step in this direction leads to musical sound, a periodic and rapid succession of vibrations, and so in a sense an outgrowth and refinement of time. To trace further the development of music, whether vocal or instrumental, is aside from our present purpose.

The ancient and primitive pastime of dancing, also hastened the development of rythm. Unregulated movements are awkward and tiresome. They may answer for a war-dance or a bacchanalian revel, but not for respectful worship or subdued pleasure. These require regular movements. The chanting of the choral song, probably the immediate forerunner of true literature, was accompanied with dancing, or at least regular movements of some kind. Thus music, song and dance were combined. But the music was without harmony, the song without beauty, and the dance without grace. Time was the controlling element.

We have now reached a deeply interesting point in our investigation. We are at the close of what may be termed the ante-literary age. Time has dealt kindly with

MARIETTA COLLEGE

a few songs of this period, and they shed a flood of light upon the beginnings of literature. The song of the Arval Brothers, one of the earliest compositions among the Romans furnishes a good illustration:

Enos, Lases, juvate.

Neve lue rue, Marmar, sins incurrere in pleores.

Satur fu fere Mars. Limen sali. Sta. Berber.

Semunis alternei advocapit conctos.

Enos, Marmor, juvato.

Triumphe.

In this we have none of the exquisite harmony of Horace nor the melodious measures of Vergil. Nor has it grandeur of thought or beauty of imagery. It consists in part of a prayer to the household gods and to Mars for help, and in part of directions to the dancers or priests, as the following rendering will show:

“Help us, O Lares! and thou Marmar, suffer not plague and ruin to attack our folk. Be satiate, O fierce Mars! Leap o’er the threshold. Halt. Now beat the ground. Call in alternate strain upon all the heroes. Help us Marmor. Bound high in solemn measure.” In order to adapt this song to the requirements of their energetic worship, and to satisfy their crude ideas of music and rythm, each line was repeated three times, and the last one five times. The effect of this is well reproduced in the following metrical translation borrowed from Wordsworth’s *Fragments and Specimens of Early Latin*:

“Help us, O Lares, help us, Lares, help us!

And thou, O Marmar, suffer not

Fell plague and ruin’s rot

Our folk to devastate.

Be satiate, O fierce Mars, be satiate!

Leap o’er the threshold! Halt! Now beat the ground.

PHI BETA KAPPA ORATION

Be satiate, O fierce Mars, be satiate!

Leap o'er the threshold! Halt! Now beat the ground.
Be satiate, O fierce Mars, be satiate!

Leap o'er the threshold! Halt! Now beat the ground.
Call to your aid the heroes all, call in alternate strain;
Call, call the heroes all.

Call to your aid the heroes all, call in alternate strain.

Help us, O Marmar, help us, Marmar, help us!

Bound high in solemn measure, bound and bound again;
Bound high and bound again!"

The translation is more musical and poetic than the original, but even in this it is easily seen that the movement takes precedence of all else. The Salian Hymn must have been wholly analagous in character. The Linus Hymn of the Greeks, which was sung by a youth who also played the harp as an accompaniment, while others danced about shouting *ai Line!* shows a more advanced stage of literary development. The thought and the metre of the song may be expressed as follows:

"O Linus, honored of all gods,
For unto thee have they given,
First among men to sing ditties
Sung with the clear-sounding voices;
Phœbus in jealousy slays thee,
Muses in sorrow lament thee."

These songs and hymns are marks of the struggle of the human mind for fullness and beauty of expression; milestones along its pathway to artistic perfection. When the idea of rythm was sufficiently developed and not till then was true poetry, the earliest form of literature, possible. "The language of poets," says Shélley in his Defence of Poetry, "has ever affected a sort of uniform and harmonious recurrence of sound, without which it were not poetry, and which is scarcely less indispensable to the

MARIETTA COLLEGE

communication of its influence than the words themselves without reference to that particular order." Much of the beauty of Shelley's own poetry, which abounds in "exquisite harmonies of word and thought," is due to his rare power of expressing the subtle relations of sound, speech and thought. In the choral song the ictus was strongly marked, just as in marching the movement is indicated by stress on the word left, as *left*, right, *left*, accompanied by a heavier tread with the left foot. The transition from this stage to rythmical accentuation was very naturally and easily accomplished after word-accent had been permanently established.

But poetry of the highest type requires more than rhythm. Every true poet must have a soul full of harmonies. He must have a quick perception of the delicate relations between the word and the idea, between the sentence and the thought, between the entire poem and the subject treated. The words, the sentences, the rhythm, the movement, must be infinitely varied to express all his varying shades of thought and emotion. They must combine to reproduce to the reader or the hearer, the pathos, the beauty, the ugliness, the grotesqueness, the repulsiveness, the horror of the scenes and events described. But this requires a language of the highest perfection; one as responsive to the ever-changing moods of the poet, as the keys of an instrument to the touch of the performer; or as the photographers dry plate to the image which flashes upon it and is gone. Literature presupposes not simply a language, but a language which is flexible, harmonious, mature. Had language remained what it was in its earliest stages, man's heaven-born thoughts, his airy fancies, his throbbing emotions, could find no fitting em-

PHI BETA KAPPA ORATION

bodiment; his delicate perception of harmony and rythm could not help him to clothe his thoughts in pleasing forms; for a crude and undeveloped language cannot be used as a medium of artistic expression. It therefore becomes necessary to follow rapidly the course of language development, to note briefly the influences which operated upon language and rendered it capable of expressing every intellectual act and condition.

When men first began to talk they used a few monosyllables which have been termed root-words. These expressed only general ideas. They could not be used for literary purposes. Their form and signification both forbade this. But change is as much a law of language as of all else earthly. Even the more permanent forms which literature fixes upon it are not able to resist entirely the operation of this law, so long as the language is used as a medium of oral communication. Three distinct stages mark the course of language-growth or change, the monosyllabic, the agglutinative or polysyllabic, and the inflective. This may be termed the inevitable course of language.

All languages except the Chinese, which, like the people using it, is anomalous, reached the third or inflective stage before they possessed a literature. This was to be pre-supposed. A language composed of such words as *terk*, *vreg*, *sek*, *bhor*, *pu*, *glubh*, all of which are theoretically root-words, does not seem pre-eminently adapted to poetic measures. At the same time a monosyllabic language may be used for literary purposes as the Chinese has been. By a slight change in the first line of Longfellow's *Excelsior*, the first and third lines of the first stanza will be composed entirely of monosyllables, and still be as rythmi-

MARIETTA COLLEGE

cal and flowing as they are now, or as the other two, however much the sense may be affected by the change:

The shades of night had come at last,
As through an Alpine village passed
A youth who bore 'mid snow and ice
A banner with this strange device,
Excelsior.

It will be observed that this poem was written in iambic measure, and that the words upon which the ictus does not fall in the monosyllabic lines, are, without exception, modifiers or connectives. But if all words had equal value this could not be done.

The same difficulty in another form would be met with in the endeavor to use in verse a language in its second stage of development. Such a word as the Greenlandish, and I may add outlandish, *aulisariartorasuarpok*, or the Algonquin *Amanganachquemini*, or the Mexican *Notlazomakuizteopixcatatzin*, could hardly find a place in light and tripping measures.

But change of form was not the only prerequisite of literature. The sounds of the language must become smoother and rounder, less harsh and rasping, numerous and varied. Many of our Indian names are melodious in sound and picturesque in meaning and as such are ready for literary use. For example: Ticonderoga, the place of the separation of the waters; Saratoga, the place of the bursting out of the waters; Ohio, the beautiful river; Minnehaha, laughing water. Furthermore, words must not only be pleasant to the ear in themselves, they must also be so in combination with other words, so that a sentence rhythm is possible. And there must be a vocabulary sufficient to express all the heights and depths of the thought and fancy of the writer. It was a long time before lan-

PHI BETA KAPPA ORATION

guage reached this mature condition. A single word accompanied by a gesture no doubt sufficed our ancestral savage to express an entire thought. A child says "dog" for "there is" or "that is a dog"; then "dog—run" for "the dog is running," or "see the dog run." When prolonged practice has rendered him expert in the use of words he revels in a profusion of names and epithets of the same object or idea. So language passed from a condition of poverty and indigence to fullness and richness, even redundancy of vocabulary. In the strife for honor which at once arose, the agreeable and expressive words were successful, those unpleasant in sound, or difficult of pronunciation or combination with other words, fell into oblivion.

Poetry is based on quantity or accent or both. Language, therefore, must have reached a reasonably mature and permanent condition, and the distinction of long and short vowels and syllables if not the word accent, must have been established, before any metrical composition was possible.

By continual use during prolonged periods, roots which, as has been said, expressed only general ideas, grew into words which by reason of their universally recognized accent, their agreeable sound and their clearly-defined signification were suitable for, and naturally suggested, metrical use.

While individual words were thus changing, many influences prompted men to make a more forceful use of language. In primitive times as in later ages the chieftain before the battle employed all his powers of oratory to fire the wild valor and stir the enthusiasm of his followers. These specimens of rude eloquence have perished, but

MARIETTA COLLEGE

their effect on language remained. They must precede if a *De Corona* or an *In Catilinam* was to follow. The wild Australian trying to rouse his courage or his fury for the battle says:

“Spear his forehead!
Spear his breast!
Spear his liver!
Spear his heart!”

and so on with the other members of the body.

The tendency to repetition to which reference has already been made is here apparent. In moments of great excitement or great emotion the thoughts and feelings struggled for adequate expression. The desire to portray scenes and events graphically; to be earnest in entreaties, and inspiring in exhortations; to issue orders and pronouncements, edicts and laws in clear and terse language; these and other influences acted upon language as a whole to shape it into an instrument so delicate and powerful that the whole vast range of man's thoughts, fancies and emotions may be communicated to his fellowmen, and in words that will charm the ear and thrill the soul.

The line of thought which we have endeavored to follow thus far may be summarized briefly as follows: Man first entertained himself with noise, afterwards with sound repeated as impulse prompted at first, then at regular intervals. This developed on the one hand into music. On the other hand the development was toward literature, his natural passion for noise being subdued into a fondness for the repetition of the same word or group of words. Both the regularly repeated sound and the repeated word find their literary representative in the ictus of poetry, which is a stress of voice recurring at regular intervals.

PHI BETA KAPPA ORATION

Our consideration of the genesis of literature would be incomplete did we not go one step further and examine briefly the character of the earliest literary efforts. The literatures of the world as they have reached us have passed the formative period and begin with hymns and epics. A vast number of songs or verses of some kind must have preceded these, such as war, wedding and funeral songs, ballads and love ditties. Of all these the war-songs were the most numerous and important. Although the family relation was early established among tribes and races, and the joy at the formation of the family bond, and the grief caused by its dissolution, were expressed in songs and dirges, yet these exerted comparatively little influence on the development of the poetic art. So the religious nature of man early found expression in song; but there is no evidence that religious songs preceded all others; on the contrary it is highly probable that they did not. Primitive man was the child of nature; war was his normal condition. He was compelled to fight for his existence. Wild beasts and wild men were alike his enemies. His eye was trained to follow the track of his foe; but it saw no beauty or grandeur in primeval forest, towering mountain, sparkling stream or rushing cataract. These roused no poetic emotions in his fierce breast. But the chief who could lead his fellows to victory and secure for them plunder and the means of subsistence, as well as honor, was their hero; to him they owed respect and gratitude. What was more natural than that they should tell the story of his bravery and sing his praises while they enjoyed the results of his daring deeds. The songs which originated in this way would be sung with appropriate changes and additions to

MARIETTA COLLEGE

inspire courage and confidence on the approach of another hostile tribe, and when death deprived them of their trusted leaders, as funeral songs. In their laudatory character they were the prototypes of the funeral oration so common among the Romans, and with which mourning nations still honor their illustrious dead.

Before engaging in battle the aid of the gods was invoked in behalf of their hero and themselves; and when the victory was won their gratitude was expressed in song. Thus there would arise several varieties of war-songs. Songs to inspire courage for the conflict; songs imploring the gods to aid them and give them victory; songs of joy and gratitude for success in the fierce fight; songs in honor of the brave chieftain who led them and spared not his own life in their defense; and lastly funeral songs, chanted as requiems to the soul of the departed hero and friend. In these lay the germs of epic and lyric poetry. As the brave chief loved to hear his deeds recounted, and his praises sung while yet alive, so his relatives and friends would strive to perpetuate his memory by preserving the rude songs that celebrated his, to them, glorious achievements; and the poet who could most acceptably tell the story of his life would receive their special favor and patronage. An incentive to poetic art was thus given and the guild of poets was soon established who produced a vast ballad literature, and prepared the way for the coming of the great poet, who could sing, not of one hero or of one petty fight, but of many heroes and of great and prolonged wars.

It would not be in harmony with our present purpose to discuss in detail the origin of epic poetry. It matters little whether the first epics were the work of one poet

PHI BETA KAPPA ORATION

or of many. Whether they were compounds of various songs and ballads, skillfully combined so as to have at least an appearance of unity, or were single poems, the offspring of individual minds. They certainly were not without literary predecessors.

The songs of entreaty and of gratitude to the gods were the natural progenitors of hymns. The development of these was slower, as the sister art of music must be developed to a high degree of perfection before true lyric poetry could exist. The statement that a "hymn to a god or gods is the earliest utterance of the human mind in every nation" must be interpreted liberally if accepted. Among modern nations the war-epos is the oldest form of literature. "It is precisely in this century of confusion and violence" says Ticknor in his *Spanish Literature* "when the Christian population of the country may be said, with the old chronicle, to have been kept constantly in battle array that we hear the first wild notes of their national poetry, which come to us mingled with their war shouts, and breathing the very spirit of their victories." The *Nibelungenlied*, the *Chanson de Roland*, the *Cid* are our modern *Iliads*. That an extensive ballad literature preceded these epics is highly probable, was, we may say, a necessary preparation for them. But these ballads must have been war-songs. The study of modern literatures can aid us but little in our investigation, for their development was not normal. They early fell under classic influences. But wherever we do find traces of natural growth, they favor the theory advanced.

Where the genesis of literature ends the development of literature begins. The relations between epic, lyric and dramatic poetry; of prose to poetry; how and

MARIETTA COLLEGE

whence grew the various forms of prose, the influence of religious, social and political conditions on the development of literature, these are topics which must claim attention in the study of its growth and history. My task is done if I have succeeded in my effort to show how the advent of literature came through the growth and perfection of language, and the development of the artistic faculty, the promise of which was found in man's predilection for noise.

Have I seemed to assign a low and unworthy origin for so noble and heavenly an art as the poetic? Not so. Humble but not ignoble, was the origin of poetry. Man himself was made from the dust of the earth. The hut of the savage must be placed beside Milan Cathedral if we wish to see the extremes of the architectural art. It is no more incredible that *Paradise Lost* must recognize the war-song as its progenitor, than that the blind poet could trace his genealogy back to ancestors of very marked cannibalistic tendencies. A devout hymn of Watts does not differ more widely from the song of the Arval Brothers than the modern steel, gang plow differs from the forked or crooked stick with which the ancient Roman farmers scratched the meager fields upon which that priestly guild invoked the blessing of fertility. Onward, upward, to higher, nobler things has been the irresistible course of the centuries. It would be irrational to suppose that literature had any other than a humble origin. What its future will be no one will venture to predict further than that it will ever be a more and more perfect expression and embodiment of that which is purest, noblest and best in the life of man.

HISTORICAL NOTE

In the year 1830 there was established at Marietta "The Institute of Education" by the Rev. Luther G. Bingham, with whom was associated the next year Mr. Mansfield French as proprietor. Early in the spring of 1832 the idea of a permanent public institution was suggested, and was received with so much favor that in December a charter was obtained for "The Marietta Collegiate Institute and Western Teachers' Seminary." The organization of a board of Trustees was effected by the election of John Cotton President, Douglas Putnam Secretary, and John Mills Treasurer. The Institute property of Messrs. Bingham and French was purchased, and in the fall of 1833 the new institution went into operation, four Professors having been appointed.

While full college work was intended to be done from the first, and was done, unfortunately the charter gave no power to confer degrees. A new charter was therefore obtained in February, 1835, giving the requisite authority, and changing the name to "Marietta College." In the spring of that year the Rev. Joel H. Linsley, pastor of the Park Street Church, Boston, was chosen President.

The first term of Marietta College opened in the autumn of 1835 with two regular college classes, the Sophomore and Freshman. The Faculty consisted of President Linsley, Middlebury 1811, who had charge of the department of Moral and Intellectual Philosophy; Henry Smith, Middlebury 1827, Professor of the Greek and Latin Languages; D. Howe Allen, Dartmouth 1829, Professor of Mathematics and Natural Philosophy; Milo P. Jewett, Dartmouth 1828,

MARIETTA GENERAL CATALOGUE

Professor of Rhetoric and Political Economy; and Samuel Maxwell, Amherst 1829, Principal of the Preparatory Department. All but President Linsley had been elected in 1833, and came directly to Marietta from the Theological Seminary at Andover.

The two classes present in the fall of 1835 went regularly on, the Sophomores taking the degree of Bachelor of Arts in the summer of 1838, forming the first class of graduates. From that time to the present the succession of graduating classes has been unbroken.

ELEROY CURTIS

Rev., D. D., B. A. Western Reserve 1845.

*JAMES EELLS

Rev., LL. D., B. A. Hamilton 1844, D. D. N. Y. Univ. 1861, Prof.
Sac. Rhet. Lane Theo. Sem. 1879—1886, died 1886.

HONORARY DEGREES

DAVID JONES
Rev., D. D.

1882

THOMAS HUGGART
M. A., B. A. Westminster Pa. 1874, Princ. South Salem Acad.

JOHN PAGE NICHOLSON
M. A., Publisher.

SAMUEL STEELE THOMSON
Rev., D. D., B. A. Wabash 1839, M. A. Wabash, Prof. Latin
Wabash.

1884

LANGDON S. THOMPSON
M. A., Prof. Purdue Univ.

MANNING FERGUSON FORCE
LL. D., B. A. Harvard 1845, LL. B. 1848, Lawyer, Brig. Gen. U.
S. Vols., Judge Superior Court Cincinnati O.

1885

GEORGE DANA
M. A., Manufacturer.

REUBEN LINNELL NYE
M. A., Lawyer, Brev. Lieut. Col. O. V. I.

ROBERT WYLIE
Rev., M. A.

GEORGE FOOT MOORE
Rev., D. D., B. A. Yale 1872, Prof. Hebrew Andover Theo.
Sem.

1886

OWEN EVANS
Rev., D. D., London England.

MARIETTA GENERAL CATALOGUE

EDWARD W. JONES

Rev., D. D.

JOSEPH BENSON FORAKER

LL. D., B. A. Cornell, Lawyer, Judge Superior Court Cincinnati, Governor of Ohio 1886—

1887

JOHN W. FULLER

M. A., Merchant, Brev. Maj. Gen. U. S. Vols.

BENJAMIN LABAREE

Rev., D. D., B. A. Middlebury 1853, and M. A. 1857, Andover Theo. Sem. 1859, D. D. Middlebury 1887, Missionary to Persia.
